Amber.

The zoning at the location of the EQ basin is Ag-1. The function of the basin is to serve as a temporary holding area related to functions of the lift station, which is also zoned Ag-1. Since the basin is a functional component of the lift station and both are Ag-1, we think the basin should be considered an accessory use to the lift station and no additional zoning action would be required by the County Commission. Can you please confirm this?
